No optional accessories

## UNIT INSTALLATION REQUIREMENTS

- ¾" 90° PVC drain fitting installed in drain pan (the installer will need to run the drain line out the side or back of the unit to the required floor drain)
- The unit requires 24" of space between the top of the unit and to ceiling to allow for proper heat exhaustion from the system.
- 3" space required on outside edges for a possible drain line and airflow around the unit
- 12" required in space on the back of the unit away from the wall to allow for possible drain and heat to exhaust out of the unit.
- Dedicated electrical hook up (by other) for 208-240/3 PH/60Hz system
- Floor location needs to be level to not void warranty of the unit
