SERIES

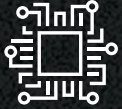

They're the new WEIGH forward.

Hobart GT Series scales have technology that's so advanced, it seems like a leap into the future.

Explore the large operator display and intuitive user interface. Experience the instant response of the quad-core processor. Marvel at labels that print faster and more efficiently than you ever thought possible.

GT Series scales deliver innovative features to drive more productive and efficient operations while reducing downtime and waste. Experience these benefits today ... and know that years into the future, GT Series scales can still deliver the performance you need.

FAST, POWERFUL DATA HANDLING

Retail operations run on massive amounts of data. GT Series scales have the power to handle it, both now and in the future. Transactions are completed faster, increasing efficiency and allowing more time to serve customers.

Quad-core processor – Delivers the speed operators need to work efficiently. Firmware upgrades and communications are completed faster, minimizing downtime.

Robust system memory and data storage – Ample system memory to seamlessly run even the most demanding applications. Large data storage capacity handles ever-growing data requirements, ensuring optimal performance now and in the future.

INTEGRATED NETWORKING

GT Series scales are network-ready with built-in wired and wireless networking options for the connectivity you want—and they're protected with the latest security protocols for the peace of mind you need. Unmatched performance and security make GT Series scales the perfect addition to an ever-evolving network environment.

Built-in IoT and diagnostics – Connect and integrate your GT Series scale with whole-store applications and get easy access to diagnostic data, so your operation can work more efficiently. Tracking data within the scale—like printhead changes, number of labels printed and a visual “health agent”—allows more informed decisions about your equipment and operations.

All of this and more can be managed at the scale, remotely or through the Hobart HTe Enterprise Asset Management software application.

Fast, secure data transfer – GT Series scales use the latest standards for both data transfer and security, so you can count on fast, secure communication.

ADVANCED LABEL PRINTING

Deli, bakery and meat departments depend on quick, trouble-free label printing. GT Series scales include multiple technologies to not only print labels fast, but also reduce downtime and expenses.

Up to 3-inch print width – Fits more information on the label, including enhanced graphics and nutritional information. Helps support regulatory requirements and reduces label length to save on consumables.

More label versatility – GT Series scales can use both lined and linerless label stock—and large label rolls too—giving you a wide range of options.

Easy-loading label cassette

Ergonomic cassette allows fast, easy label roll changes to help minimize downtime.

Up to 8 inches-per-second print speed

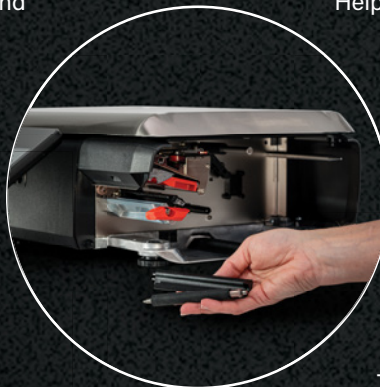

Helps fast-paced environments like bakeries keep up with production demands and fill shelves more quickly.

Low label stock detection

Configurable alerts help operators plan label stock replacement and avoid unexpected downtime.

Hot swap printhead and print roller

These components can be quickly and easily replaced without tools or the expense of a service call, reducing downtime.

A VARIETY OF OPERATOR SCREEN DISPLAY OPTIONS

DESIGNED WITH THE *FUTURE* IN MIND.

Inside and out, GT Series scales have been engineered to deliver cutting-edge performance, efficiency and ease of use—not just today, but year after year. Make an investment in the future and get a combination of advanced features that you can only find in a Hobart GT Series scale.

INNOVATIVE SOFTWARE AND APPLICATIONS

The GT scale includes unique, advanced software and applications—and it integrates with essential Hobart auxiliary software platforms, making it the most versatile scale for retail operations.

Operator training - Instructional videos about core functions are integrated into the scale, giving operators step-by-step guidance. Simple navigation provides quick and easy access to a robust knowledge center and equips operators with the tools needed to serve customers quickly.

Build a Meal - Perfect for prepared-food departments, the Build a Meal feature makes it simple to combine entrées and side dishes. The feature supports either a fixed or unlimited number of sides, logging their quantity and the transaction to ensure accurate inventory management. Customize this application to build a cake, pizza or sandwich!

Multi-department - GT scales let users quickly switch departments as needed and maintain separate PLUs for each department. Operators can easily optimize scale usage with one tap, making department transitions effortless.

Consolidated audit trail - GT scales come equipped with data tracking to comply with CAT III traceability requirements, allowing remote updates, eliminating the need for recertification for minor weigher configuration changes, and reducing downtime and complexity.

Integration with HTe Enterprise

Management software - The HTe platform is a complete solution to manage Hobart scales. It combines the management of assets and dynamic media with live store pricing control, providing a consistent deployment that ensures fleet compliance. HTe offers live syncing with a cloud server for instant scale status—plus real-time self-synchronization and PLU updates to reduce downtime and increase profitability.

Integration with FreshXpress™ - This software solution integrates omni-channel retail orders with fresh department operations, sending order information directly to the GT scale. It streamlines the order fulfillment process, increases department efficiency and improves the customer experience.

Additional features and functionality - Contact Hobartto learn how GT Series scales can help retail businesses of any size increase efficiency, reduce downtime and optimize department operations with:

- Remote printing
- Media management
- Bakery batching
- Transactions and totals that provide more visibility to shrink
- Streamlined firmware updates

NEXT-GENERATION USER INTERFACE

GT Series scales feature an industry-leading user interface that delivers ultimate ease of use, providing enhanced productivity and efficiency in each department.

Large, high-resolution screen options – Choose from various operator display sizes to better customize the scale to business needs. Each option displays crisp, clear text and images, and puts core functions at the operator's fingertips for fast, efficient operation.

5-screen swipe – Patented swipe-screen technology provides even more of the applications that operators need and is customizable to work with your operation's unique, important processes.

Customized flashkeys – Create unique shortcuts specific to each department, minimizing search and navigation time for operators.

Capacitive touch – This advanced design works like a smartphone's screen: It's more responsive and easier to use than older touchscreens.

Hardened screen – More than twice the hardness of other designs to resist scratches and damage, so your new scale can stay working like new for years to come.

Clean Screen feature – Prevents unwanted key presses so cleaning the screen is fast and easy.

Codechecker™ printhead monitor – Visually indicates printhead health status so operators can troubleshoot at the scale, plan replacements, and minimize downtime and costs.

Offline indicator – Visible notification that the network connection needs to be restored to prevent communication errors and allow real-time pricing updates.

Modern, intuitive design – Industry-leading user interface designed for ultimate ease of use. Simple navigation reduces training time and speeds up transactions.

- Fast navigation to key functions
- Simplified menu options
- Universal icons
- Enhanced search functionality, including by PLU, description and categories
- "One-touch" accessibility with 5 customized swipe screens
