

## Features & Benefits

**Super-Chill:** Using very precise temperature control Lumilinna can hold beverages below freezing without actually freezing them solid. By maintaining product at this precise temperature you can dispense beverages that once opened, will develop internal ice crystals.

***"Serving product at this temperature is the newest way to enjoy a cold frosty beverage"***

The highly-developed thermal insulation technology and the high-power fan motor enables the precise temperature control.

**Freezing:** Water normally freezes at 32° F but it will become solid when slowly chilled below freezing. The phenomenon is called "supercooling." Supercooled product crystallizes when agitated or poured and produces soft, delicate ice slush which creates a new taste experience versus conventional cooled product.

**Storage:** The cooler has four separate internal storage compartments allowing for multiple flavors and packages to be stored at one temperature. Each compartment has a front swing lexan door which helps to prevent an inrush of warm air while product selection is being made.

**Versatile Placements:** Cooler is the ideal size for easy above or below counter-top placement.

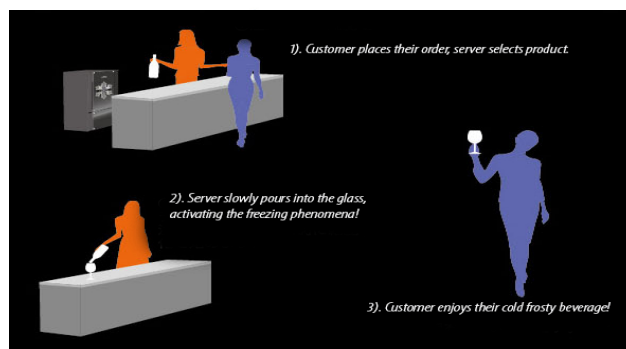

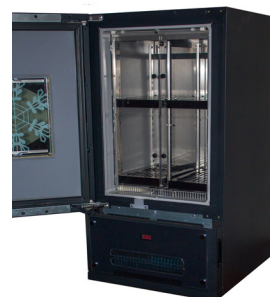

***Ideal for regular carbonated beverages, coffee, energy and alcoholic drinks.***
